In your home, one of the most important aspects is your safety. Even if you want a home security system that causes less disturbances, it still will do so. Regardless of what type of system you choose, you are going to have to have some type of lighting in your home. The difference between Christmas lights and regular fluorescents has many advantages. Some of these include a cost to use, an economic savings, a tax break, and convenience. At Christmas time, most people understand the tax saving associated with the lighting, but probably don't give much thought to the other benefits. While it is possible to have those extra safety features, it will affect the overall performance of the system and you will have to worry about more than you care to throughout the year. The lights come on and off as they are supposed to, while your home security system allows you to have complete control of such actions as adding more lights, turning off lights, checking on the up-and-coming company that is protecting you, or taking a shower. The main thing I want people to take away from the closing is I believe that this is the year where we'll start to really see the light bulb change in the technology industry. I think we're at the point where the traditional light bulb is becoming obsolete. Just as the cell phone, the television, the microwave and the computer changed our lives, I think the light bulb is going to be the next major change in the industry. As far as I understand, the main difference is that Final Cut Pro is for video production and it ships with pre-made templates for things like web, trailers, music videos and other types of content. But if you want to work with raw video footage, you can export the footage into the internal Adobe Premiere Pro (free) and begin editing it there. The whole video editor isn't limited to just one timeline, however. In fact, there's a workspace for other parts of your editing (multiple editing tracks, etc.). I work in Premiere pro as well as InDesign and some other Adobe products. Why is this useful? Well, you can access all your layers, objects, colors, etc. from almost ANY Adobe product.

One of the big features from Photoshop, Light and Shadow helps you take your image and see it in a new way. Photoshop has a revolutionized and deep folder structure that makes the most use of the file system. Adobe's Direct Edit allows you to go back to simpler times with true linear edits. Adobe's Portrait Lighting and HDR Photography are two powerful feature from Photoshop that are excellent for working with portraits. You can use Imagescope to add 3D depth to your photos. Photoshop has so many features now that it's incredible. Photoshop has made a complete reimaged interface that will be great for pro and amateur designers. Adobe kept it simple yet powerful. One of the newer features in Photoshop is the ability to easily add artistic effects on other layers. One of the advantages of the costs for certain effects has been the ability to work with clipping masks, a movement that's less likely to happen. If you can achieve proper exposure with an automatic exposure system, you'll likely have success with the new Histogram Science, which will adjust the exposure to make your image brighter or darker. The Content Aware Fill tool has been refined to be far more accurate. If you're creating your own type of video editing software, you'd be remiss if you didn't at least include the amazing video editing feature set that Adobe has in place. This is something that will step into everything from news to 3D animation to both the motion camera formats and more. The combination of high-quality results and an easy workflow will be something that's soon to be the leading toolset in the industry.
